

# Vue Workshop (1/2)

Workshop goal

# Workshop goal

- Part 1
  - Migrate from Vue 2 to Vue 3
  - Learn about the Vue Migration build
  - Upgrade the Vue Router
  - Create reusable components
  - Learn about the composition API
  - Create composition functions
- Part 2
  - Use components Slots
  - Manage state using Vuex
  - Explore the Vue Router
  - Use Vuetify components
  - Type check the code using TypeScript
  - Server side rendering of Vue applications using Nuxt

Type it out  
by hand?

*"Typing it drills it into your brain much better than simply copying and pasting it. You're forming new neuron pathways. Those pathways are going to help you in the future. Help them out now!"*

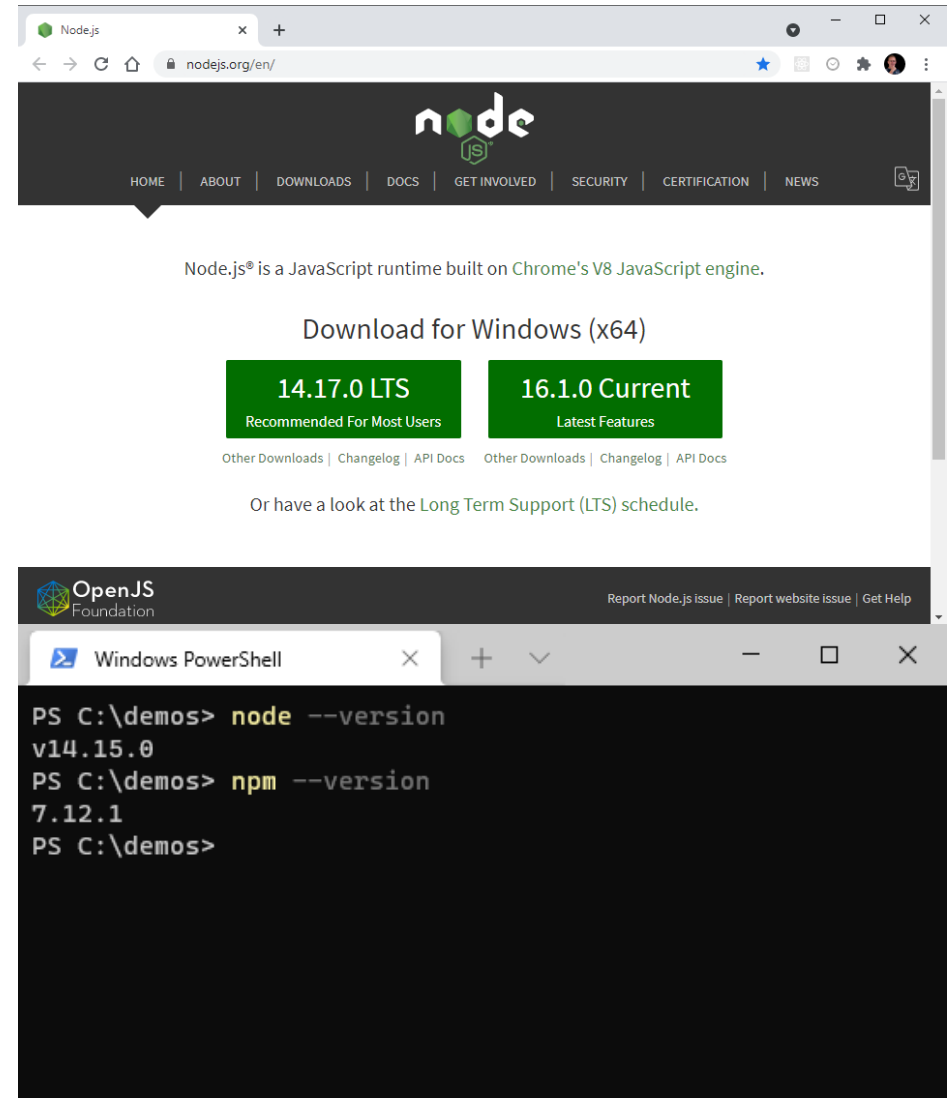

# Prerequisites

Install Node & NPM

Install the GitHub repository

# Install Node.js & NPM

- Minimal:
  - Node version 14
  - NPM version 7

# Clone the GitHub Repository

```
Windows PowerShell
PS C:\demos> git clone git@github.com:mauricedb/vue-movies-workshop.git
Cloning into 'vue-movies-workshop'...
remote: Enumerating objects: 292, done.
remote: Counting objects: 100% (292/292), done.

# Checkout branch & install NPM packages

```
Windows PowerShell
PS C:\demos\vue-movies-workshop> git checkout origin/start-here --track
Switched to a new branch 'start-here'
Branch 'start-here' set up to track remote branch 'start-here' from 'origin'.
PS C:\demos\vue-movies-workshop> npm install
npm WARN deprecated request-promise-native@1.0.9: request-promise-native has been deprecated because it extends the now deprecated request package, see https://github.com/request/request/issues/3142
npm WARN deprecated @hapi/topo@3.1.6: This version has been deprecated and is no longer supported or maintained
npm WARN deprecated @hapi/bourne@1.3.2: This version has been deprecated and is no longer supported or maintained
npm WARN deprecated har-validator@5.1.5: this library is no longer supported
npm WARN deprecated debug@3.2.6: Debug versions >=3.2.0 <3.2.7 || >=4 <4.3.1 have a low-severity ReDos regression when used in a Node.js environment. It is recommended you upgrade to 3.2.7 or 4.3.1. (https://github.com/visionmedia/debug/issues/797)
npm WARN deprecated fsevents@1.2.13: fsevents 1 will break on node v14+ and could be using insecure binaries. Upgrade to fsevents 2.
npm WARN deprecated chokidar@2.1.8: Chokidar 2 will break on node v14+. Upgrade to chokidar 3 with 15x less dependencies.
npm WARN deprecated querystring@0.2.0: The
npm WARN deprecated html-webpack-plugin@3.2.0: 3.x is no longer supported
npm WARN deprecated @hapi/address@2.1.4: Moved to 'npm install @sideway/address'
npm WARN deprecated babel-eslint@10.1.0: babel-eslint is now @babel/eslint-parser. This package will no longer receive updates.
npm WARN deprecated request@2.88.2: request has been deprecated, see https://github.com/request/request/issues/3142
npm WARN deprecated @hapi/hoek@8.5.1: This version has been deprecated and is no longer supported or maintained
npm WARN deprecated @hapi/joi@15.1.1: Switch to 'npm install joi'
npm WARN deprecated core-js@2.6.12: core-js@<3.3 is no longer maintained and not recommended for usage due to the number of issues. Because of the V8 engine whims, feature detection in old core-js versions could cause a slowdown up to 100x even if nothing is polyfilled. Please, upgrade your dependencies to the actual version of core-js.

- Repository: <https://github.com/mauricedb/vue-movies-workshop>
- Slides:

```
1 // vue.config.js
2 module.exports = {
3   chainWebpack: (config) => {
4     config.resolve.alias.set("vue", "@vue/compat");
5
6     config.module
7       .rule("vue")
8       .use("vue-loader")
9       .tap((options) => {
10         return {
11           ...options,
12           compilerOptions: {
13             compatConfig: {
14               MODE: 2,
15             },
16           },
17         };
18       });
19   },
20 };

```

# From Vue 2 to Vue 3

# From Vue 2 to Vue 3

- Vue 3 is **not 100% backward compatible** with Vue2
- Mostly **adding new features**
  - Composition API
  - Teleport
  - Multiple root nodes in a template
- But **changing or dropping some features**
  - Application initialization
  - Reactivity
  - Slot naming
  - Filters
- Vue 3 dropped support for Internet Explorer 11

# Vue Migration Build

- A **special version** of Vue 3
  - With support for most Vue 2 features

# Workflow

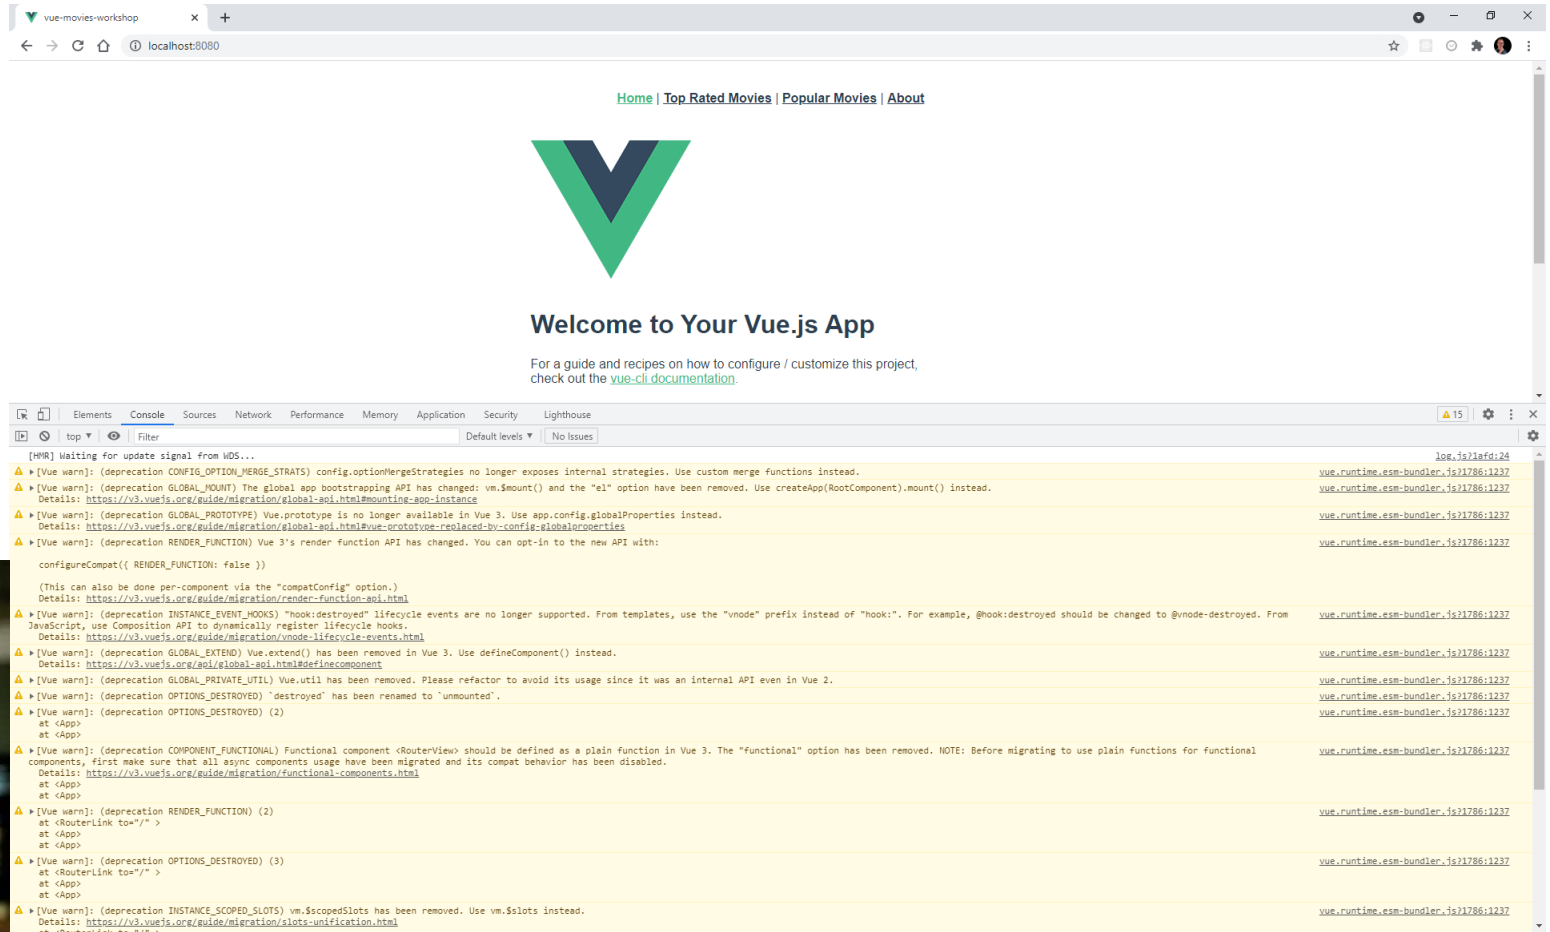

- First upgrade **vue-cli**
  - `vue upgrade`
- **Uninstall Vue 2**
  - `npm uninstall vue vue-template-compiler @vue/test-utils`
- **Install Vue 3**
  - `npm install vue@3`
  - `npm install -D @vue/compiler-sfc @vue/test-utils@next`
- Install the **Vue migration build**
  - `npm install @vue/compat`
- Note: There is a **Vue CLI command** that automates this
  - `vue add vue-next`
  - Only works on simple applications

# Add/Update vue.config.js

```
JS vue.config.js U x
JS vue.config.js > ...
1 // vue.config.js
2 module.exports = {
3   chainWebpack: (config) => {
4     config.resolve.alias.set("vue", "@vue/compat");
5
6     config.module
7       .rule("vue")
8       .use("vue-loader")
9       .tap((options) => {
10         return {
11           ...options,
12           compilerOptions: {
13             compatConfig: {
14               MODE: 2,
15             },
16           },
17         };
18       });
19   },
20 };
```

Start the app  
npm run serve

Update mount code

main.js

```
JS main.js M X
src > JS main.js > ...
You, seconds ago | 1 author (You)
1 | import { createApp } from "vue";
2 | import App from "./App.vue";
3 | import router from "./router";
4 |
5 | createApp({ ... App, router }).mount("#app");
```

Vue router 3 to 4

# Vue router 4

- Update **Vue router** to version 4
  - `npm uninstall vue-router`
  - `npm install vue-router@4`

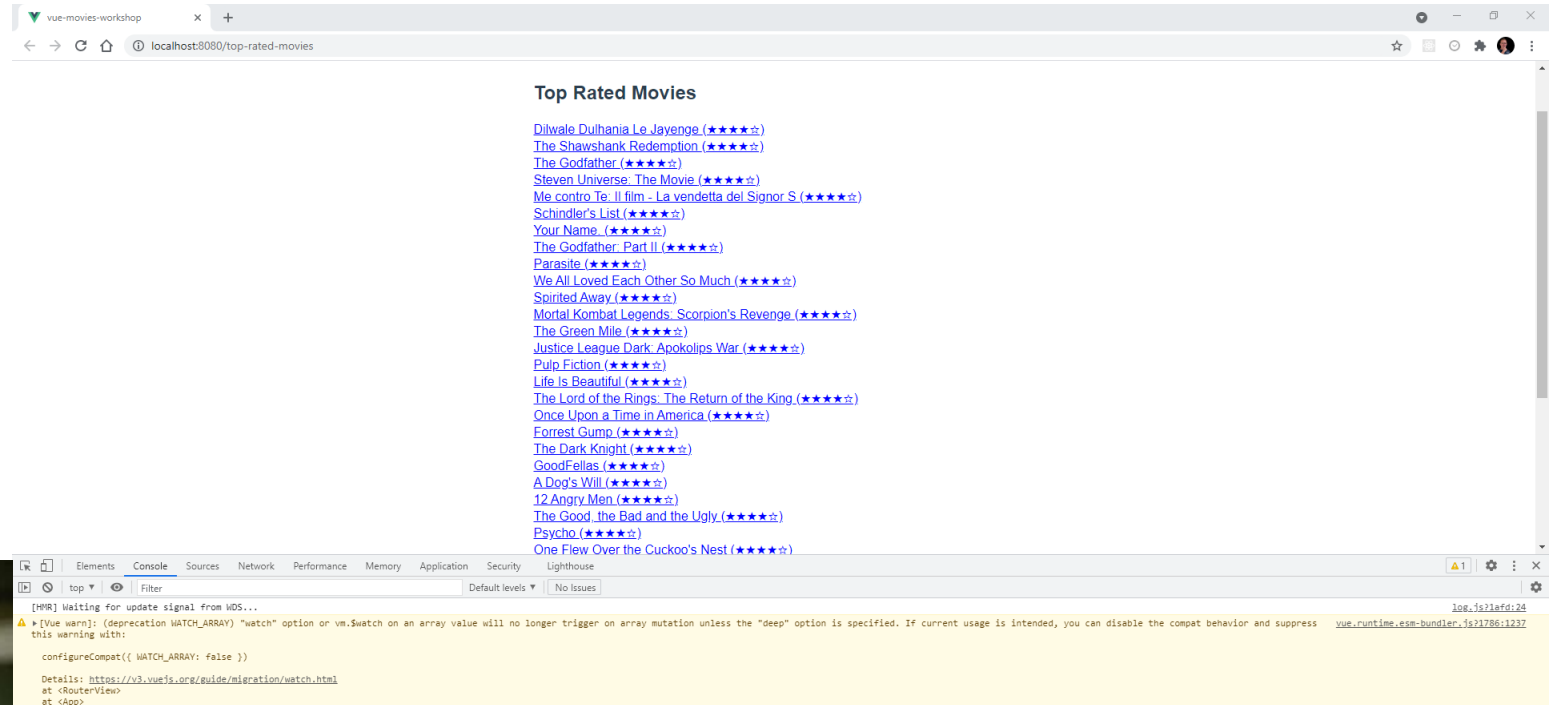

# router/index.js

```
JS index.js M x
src > router > JS index.js > ...
1 import { createRouter, createWebHistory } from "vue-router";
2 import Home from "../views/Home.vue";
3 import MovieList from "../views/MovieList.vue";
4 import MovieDetails from "../views/MovieDetails.vue";
5
6 > const routes = [ ...
47 ];
48
49 const router = createRouter({
50   history: createWebHistory(process.env.BASE_URL),
51   routes,
52 });
53
54 export default router;
```

main.js

```
JS main.js M X  
src > JS main.js  
You, seconds ago | 1 author (You)  
1 import { createApp } from "vue";  
2 import App from "./App.vue";  
3 import router from "./router";  
4  
5 createApp(App).use(router).mount("#app");
```

Start the app  
npm run serve

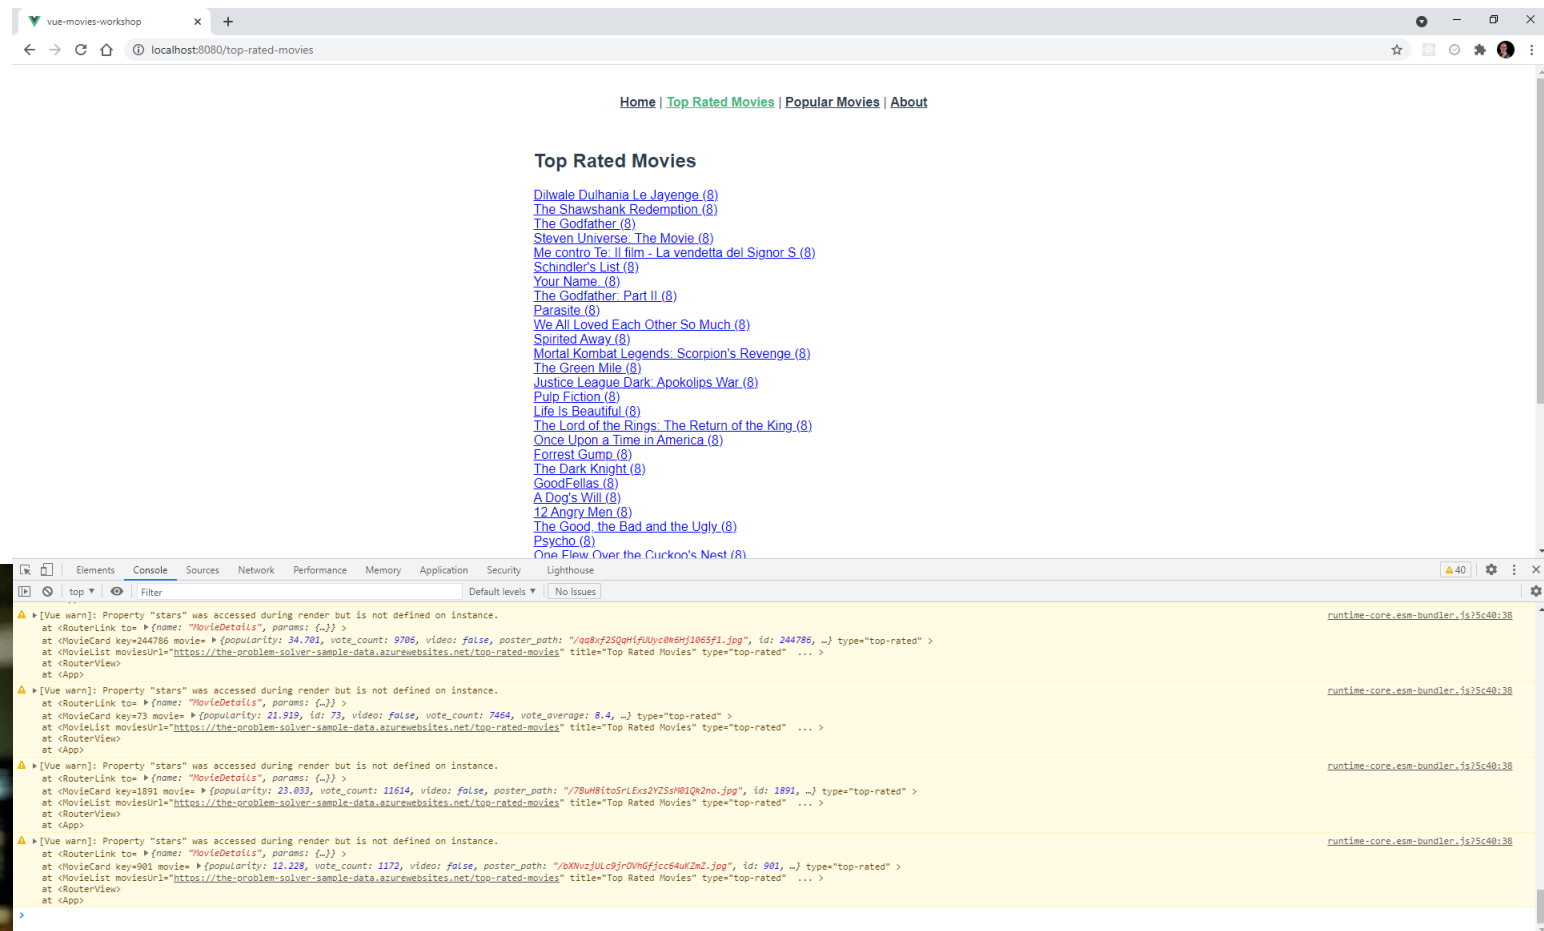

Remove the migration build

# Workflow

- **Remove the migration build**
  - `npm uninstall @vue/compat`
  - Remove/Update `vue.config.js`
- Note: The rating stars filter is now broken

Fix the rating stars

# Removed APIs

## Removed APIs

- `keyCode` support as `v-on` modifiers
- `$on`, `$off` and `$once` instance methods
- Filters
- Inline templates attributes
- `$children` instance property
- `propsData` option
- `$destroy` instance method. Users should no longer manually manage the lifecycle of individual Vue components.
- Global functions `set` and `delete`, and the instance methods `$set` and `$delete`. They are no longer required with proxy-based change detection.

# Filters

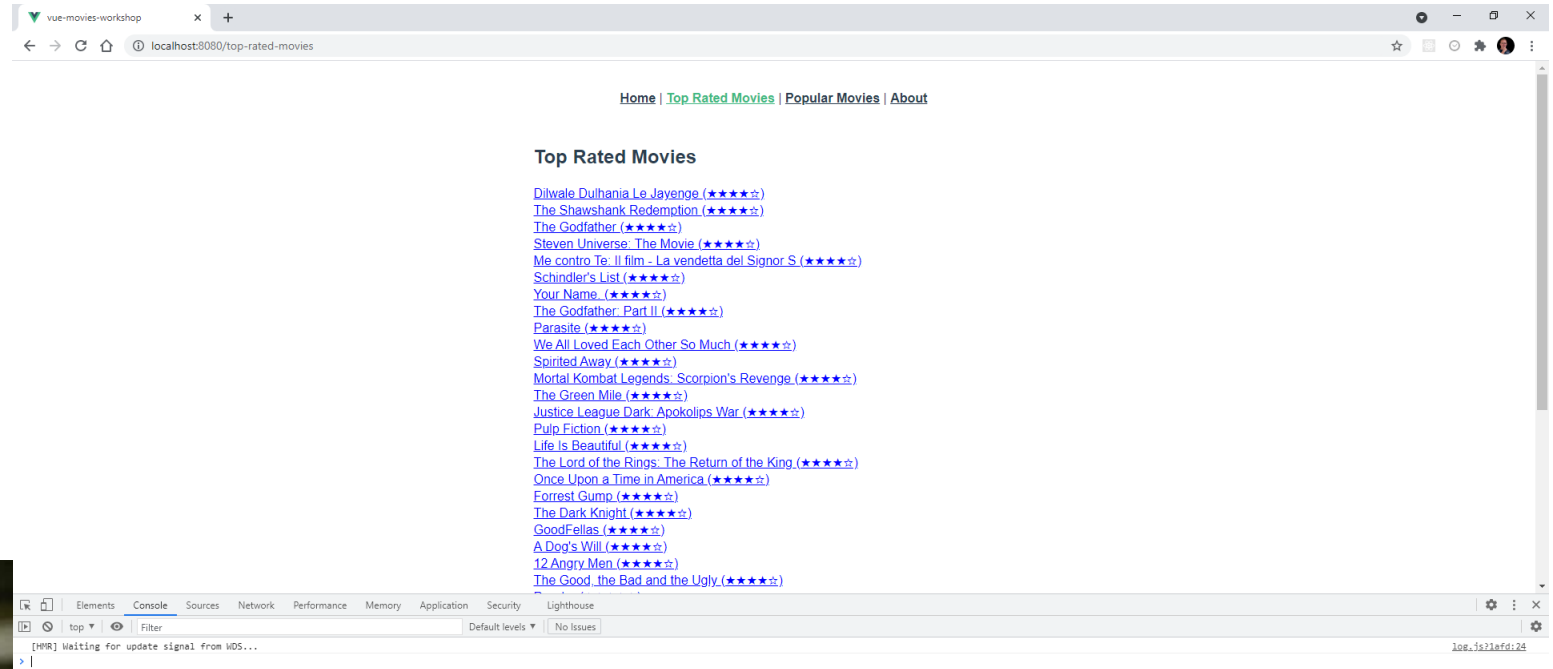

- **Filters have been removed** from Vue 3
  - Replace with computed property
  - Or with a function call

# MovieCard.vue

```
MovieCard.vue M x
src > views > MovieCard.vue > {} "MovieCard.vue"

You, 2 minutes ago | 1 author (You)
1 <template>
2   <div>
3     <router-link :to="{ name: 'MovieDetails', params: { id: movie.id, type } }">
4       {{ movie.title }}
5       <span :title="movie.vote_average"> ({{ voteAsStars }}) </span>
6     </router-link>
7   </div>
8 </template>
9
10 <script>
11 export default {
12   props: {
13     movie: Object,
14     type: String,
15   },
16   computed: {
17     voteAsStars() {
18       return "".padEnd(this.movie.vote_average / 2, "★").padEnd(5, "☆");
19     },
20   },
21 };
22 </script>
```

# Computed stars

# Reusable components

# Reusable components

- Create **reusable components** as building blocks
- Add **v-model support** where needed
  - Receive the `modelValue` prop
  - Submit the `update:modelValue` event

# LabeledInput.vue

```
LabeledInput.vue M x
src > views > LabeledInput.vue > {} "LabeledInput.vue"
You, seconds ago | 1 author (You)
1 <template>
2   <div>
3     <label class="input-label" :for="$attrs.id">{{ label }}</label>
4     <input
5       type="text"
6       class="form-control"
7       :value="modelValue"
8       @input="$emit('update:modelValue', $event.target.value)"
9     />
10  </div>
11 </template>
12
13 <script>
14 export default {
15   props: ["label", "modelValue"],
16   emits: ["update:modelValue"],
17 };
18 </script>
19
20 <style scoped>
21 .input-label {
22   display: inline-block;
23   margin-top: 1em;
24   margin-bottom: 0.5em;
25 }
26
27 .form-control {
28   width: 100%;
```

# MovieDetails.vue

```
MovieDetails.vue M X
src > views > MovieDetails.vue > {} "MovieDetails.vue" > template > div > form > fieldset.fieldset
You, seconds ago | 1 author (You)
1 <template>
2   <div>
3     <div v-if="error">{{ error }}</div>
4     <div v-else-if="loading">Loading ... </div>
5     <form v-else @submit.prevent="submitForm" @reset="resetForm" novalidate>
6       <fieldset class="fieldset" :disabled="saving">
7         <LabeledInput label="Title" v-model="movie.title" />
8         <div>
9           <label>
10            <span class="input-label">Overview</span>
11            <textarea v-model="movie.overview" rows="5" class="form-control" />
12          </label>
13        </div>
14        <LabeledInput
15          label="Vote average"
16          v-model.number="movie.vote_average"
17          type="number"
18        />
19        <LabeledInput
20          label="Release date"
21          v-model="movie.release_date"
22          type="date"
23        />
24
25        <div class="button-row">
26          <button type="submit">Save</button>
27          <button type="reset">Reset</button>
28        </div>
```

# Using inheritAttrs

- Use **inheritAttrs** to control where additional attributes are added
  - By default at the components root HTML tag
- Use `v-bind="$attrs"` to add them to any required HTML tag

# LabeledInput.vue

```
LabeledInput.vue M x
src > views > LabeledInput.vue > {} "LabeledInput.vue"
You, seconds ago | 1 author (You)
1 <template>
2   <div>
3     <label class="input-label" :for="$attrs.id">{{ label }}</label>
4     <input
5       type="text"
6       class="form-control"
7       :value="modelValue"
8       @input="$emit('update:modelValue', $event.target.value)"
9       v-bind="$attrs"
10    />
11  </div>
12 </template>
13
14 <script>
15   export default {
16     inheritAttrs: false,
17     props: ["label", "modelValue"],
18     emits: ["update:modelValue"],
19   };
20 </script>
21
22 <style scoped>
23   .input-label {
24     display: inline-block;
25     margin-top: 1em;
26     margin-bottom: 0.5em;
27   }
```

# Composition API

# Composition API

- The Composition API is an **alternative** way of creating components
  - Doesn't replace the Options API!
- Makes most sense in more **complex components**
  - But can be used everywhere
- Export a **setup() function**
  - Receives the props and context as parameters
  - Returns an object with items available in the template
- Note: There is a [Vue 2 plugin](#) for Composition API

# Lifecycle Hooks

# Lifecycle Hooks

- Import and call with a callback function **in the setup() function**
- All functions start with on...
  - onMounted()
  - onUnmounted()
  - Etc.
- The setup() function itself replaces **the created( ) hook**

# Reactivity

# Reactivity

- The Vue reactivity is **completely rewritten** in Vue 3
  - Now based on JavaScript proxy objects
- More flexible and fewer edge cases
  - But only works in modern browsers

# Reactive Helper Functions

- `ref()`
- `reactive()`
- `toRefs()`
- `computed()`
- `watch()`
- `watchEffect()`

# ref()

- Use a `ref()` to create a **reactive variable**
  - Use the `ref.value` in the code
  - Use the `ref` directly in the template
- Works both for **objects and primitive** values

# reactive()

- Can be used to create a **reactive object**
  - No wrapping `.value` property
- Using a `ref()` calls `reactive()` internally for an object
  - Not often used as `ref()` achieves almost the same result

# computed()

- Creates a **reactive value based on other reactive values**
  - Automatically recomputes the result when the dependencies update
- Computed values are **usually read only**
  - But they can be read/write when needed

# watch() watchEffect()

- **watch()** a **reactive value** and execute when updated
  - The source can be a function or a ref
  - Pass in an array to watch multiple sources
  - Similar as `this.$watch()` in the Options API
- There is a new and similar `watchEffect()` in Vue 3
  - Similar to `computed()`
  - Often the **better option** in Vue 3

# toRefs()

- **Converts** a reactive object to an **object with reactive properties**
  - The `toRefs()` function turns a new object
- The **props** passed to the `setup()` function are not reactive
  - With `toRefs()` you can watch for prop updates

# toRaw()

- Turn a reactive object back **into a normal object**
  - With the `toRaw()` function

# MovieList using the Composition API

# MovieList.vue

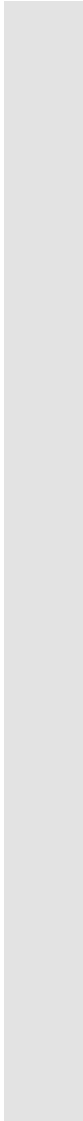

```
MovieList.vue M X
src > views > MovieList.vue > {} "MovieList.vue"
19 <script>
20 import { ref, onMounted, watch } from "vue";
21 import MovieCard from "../MovieCard.vue";
22
23 export default {
24   components: {
25     MovieCard,
26   },
27   props: { ...
40   },
41   setup(props) {
42     const error = ref(null);
43     const loading = ref(true);
44     const movies = ref([]);
45
46     async function fetchMovies() {
47       try {
48         const rsp = await fetch(props.moviesUrl);
49
50         if (rsp.ok) {
51           movies.value = await rsp.json();
52         } else {
53           error.value = rsp.statusText ?? "Failed to load data";
54         }
55       } catch (error) {
56         error.value = error?.message ?? "Failed to load data";
57       } finally {
58         loading.value = false;
59       }

```

# MovieList.vue

```
MovieList.vue M X
src > views > MovieList.vue > {} "MovieList.vue"
48 |     const rsp = await fetch(props.moviesUrl);
49 |
50 |     if (rsp.ok) {
51 |       movies.value = await rsp.json();
52 |     } else {
53 |       error.value = rsp.statusText ?? "Failed to load data";
54 |     }
55 |   } catch (error) {
56 |     error.value = error?.message ?? "Failed to load data";
57 |   } finally {
58 |     loading.value = false;
59 |   }
60 | }
61 |
62 | onMounted(() => fetchMovies());
63 |
64 | watch(
65 |   () => props.moviesUrl,
66 |   () => fetchMovies()
67 | );
68 |
69 | return {

51     const saving = ref(false);
52     const movie = ref(null);
53
54     const uriTypeFragment = computed(() =>
55       props.type === "popular" ? "popular-movies" : "top-rated-movies"
56     );
57
58     const movieUrl = computed(
59       () =>
60         `${process.env.VUE_APP_API_ORIGIN}/${uriTypeFragment.value}/${props.id}`
61     );
62
```

# MovieDetails.vue

```
MovieDetails.vue M x
src > views > MovieDetails.vue > {} "MovieDetails.vue"

63 |   async function fetchMovie() {
64 |     try {
65 |       loading.value = true;
66 |       const rsp = await fetch(movieUrl.value);
67 |
68 |       if (rsp.ok) {
69 |         movie.value = await rsp.json();
70 |       } else {
71 |         error.value = rsp.statusText ?? "Failed to load data";
72 |       }
73 |     } catch (error) {
74 |       error.value = error?.message ?? "Failed to load data";
75 |     } finally {
76 |       loading.value = false;
77 |     }
78 |   }
79 |
80 |   onMounted(() => fetchMovie());
81 |
82 |   watch(movieUrl, () => fetchMovie());
```

# MovieDetails.vue

```
MovieDetails.vue M x
src > views > MovieDetails.vue > {} "MovieDetails.vue"

84 |     async function saveMovie() {
85 |     try {
86 |         saving.value = true;
87 |         const rsp = await fetch(movieUrl.value, {
88 |             method: "put",
89 |             headers: {
90 |                 "Content-Type": "application/json",
91 |             },
92 |             body: JSON.stringify(movie.value),
93 |         });
94 |
95 |         if (rsp.ok) {
96 |             movie.value = await rsp.json();
97 |         } else {
98 |             error.value = rsp.statusText ?? "Failed to save data";
99 |         }
100 |     } catch (error) {
101 |         error.value = error?.message ?? "Failed to save data";
102 |     } finally {
103 |         saving.value = false;
104 |     }
105 | }
```

# MovieDetails.vue

```
MovieDetails.vue M x
src > views > MovieDetails.vue > {} "MovieDetails.vue"

107   async function submitForm() {
108     await saveMovie();
109     if (!error.value) {
110       router.push(`/${uriTypeFragment.value}`);
111     }
112   }
113   function resetForm() {
114     fetchMovie();
115   }
116
117   return {
118     error,
119     loading,
120     saving,
121     movie,
122     submitForm,
123     resetForm,
124   };
125 },
126 };
127 </script>
```

# Composition Functions

# Composition Functions

- **Extract** functionality into **reusable functions**
  - Use anything you would use in the `setup()`
- **More reliable** than using mixins
  - No accidental naming collisions
- Composition API **naming convention**
  - Prefix a function with “use”

# useFetchData.js

```
JS useFetchData.js M X
src > composables > JS useFetchData.js > ...
1 import { ref, onMounted, watch } from "vue";
2
3 export default function useFetchData(url) {
4   const error = ref(null);
5   const loading = ref(true);
6   const data = ref(null);
7

68
69    async function saveMovie() {
```

watchEffect()

# watchEffect()

- **Automatically watches** all dependencies
  - Even deep dependencies
  - Run the watch function immediately

# useFetchData.js

```
JS useFetchData.js X
src > composables > JS useFetchData.js > ...

You, 2 days ago | 1 author (You)
1 import { ref, watchEffect } from "vue";
2
3 export default function useFetchData(url) {
4   const error = ref(null);
5   const loading = ref(true);
6   const data = ref(null);
7
8   > async function fetchData() { ...
22   }
23
24   watchEffect(() => fetchData());
25
26   return { error, loading, data, fetchData };
27 }
```

# Conclusion

- Migrating from Vue 2 to 3 is usually not hard
  - The migration build help a lot
- Most external libraries need to be updated
  - Not all are compatible with Vue 3 yet
- The Composition API is an improvement over the Options API
  - But the Options API still works
  - Reuse code with composition functions
- The Reactive API has been completely rewritten
  - More flexible and fewer edge cases
